## eRecording Partners Network

**Any submitter of documents will be able to communicate with any catcher.**

**Counties of all sizes throughout the U.S. will be able to take advantage of eRecording benefits.**

**eRecording will be the solution we knew it could be.**

eRecording Partners Network (ePN) is the catalyst to make eRecording the preferred document processing solution bridging the gap between the document creators and the counties by facilitating their integration into the partnership network through mutually beneficial relationships. Through ePN's advanced technologies we are able to open the channels of communication to allow any submitter of documents to communicate with any catcher. One of ePN's primary goals is to dramatically increase eRecording volume by eliminating barriers between submitters (title company, bank, law office) and counties.

ePN makes it possible for all counties of all sizes throughout the United States to access the proven technology of eRecording to take advantage of its many benefits such as faster processing, quicker turn-around times, more cost effective transmission of documents, etc. Counties will no longer have to spend time and money to allow new submitters and they will minimize the costs associated with the support of eRecording. Imagine lowering costs and improving efficiencies.

In today's world of eRecording, submitters are limited by specific "agreements" as to which counties they can communicate with and vice versa. By providing technology that opens these lines of communication and at the same time providing these technologies to counties and submitters that have been historically excluded due to costs and size, ePN provides the bridge for all submitters and catchers. ePN's goal is to connect these networks to allow virtually all systems to communicate with each other.

ePN was borne out of the necessity to accelerate the advancement of eRecording. Submitters want to be able to communicate with any county in their region and counties want to be able to receive data from all legitimate submitters. Currently these submitters need to customize their software to every individual county vendor software product out there. This requires expensive resources from the county vendor, county, county IT, and submitter staffs which makes it a costly proposition across the board. ePN provides the cost effective solution to eliminate this costly and time consuming burden.

eRecording has not become the solution we have dreamed it could be — but with ePN it will. Come join us as we change the face of eRecording for the benefit of everyone.
